

ABOUT US

As far back as 2012, Railmark Track Works Inc. has been offering its ECORail line of biobased, biodegradable, EPA-Approved, and USDA-Designated railroad lubricants made from USA-grown crops making them the safest for the environment, the public, and your employees. Railmark was an early proponent of the use of environmentally friendly railroad products, long before environmental stewardship became the trend.

ECORail®'s first product is our **RAIL SWITCH PLATE LUBRICANT** which is ideal for use when lubricating switches and switch plates (recommended monthly). This product works well in all standard manual and powered applicators. The texture of this product works well with wayside lubricators using "spray-type" application methods. This product is recommended for year-round use in most climates due to the higher viscosity index properties found in all our biobased lubricants. For more frigid and northern climates, ECORail offers a "**FRIGID CLIMATE (FC)**" version when temperatures remain below -18 degrees Celsius (0 degrees Fahrenheit) for extended periods of time.

- **ECORail® Rail Switch Plate Lubricant**

Available in:

- 5-Gallon Plastic Pails (#12030)
- 55-Gallon Metal Drums (#12031)
- 275-Gallon Plastic Totes (#12032)

ECORail®'s second product is our **TOP OF RAIL GREASE** which is ideal for use in all wayside lubricators (SKF/Lincoln, Portec/LB Foster, etc.) that use the top of rail applicator bars which release the product to the top of rail. This product can also be applied with manual applications, straight to the rail. This product contains Molygraph, which is made of molybdenum disulfide and other natural, biobased polymers. This allows ECORail's **TOP OF RAIL GREASE** to fill the microcracks in the track surface, create a metal-to-metal separation between wheel and track, as well as dries out quickly leaving a thin film. The product is water soluble and remains stable and flowable in the dispenser for a long time without drying.

- **ECORail® Top of Rail Grease**

Available in:

- 5-Gallon Plastic Pails (#12090)
- 55-Gallon Metal Drums (#12091)
- 275-Gallon Plastic Totes (#12092)

Freight Charges: Freight charges are pre-pay and add using lowest cost method.

AUTHORIZED DISTRIBUTORS: ECORail® biobased lubricants are offered directly through Railmark Track Works Inc. or through one of our many authorized distributors across the country and through online supply sites. Our local distributors can provide monthly inspection and lubrication programs. We are happy to connect you with our distribution chain.

FRICTION MANAGEMENT PROGRAMS: Contact us about our new Friction Management Services and turn-key Friction Management Systems for your railroad operation. This includes monthly service and maintenance programs for your existing wayside lubricators with our ECORail® products. Railmark offers full service, turn-key installation, monthly servicing, and leasing of entire wayside lubrication systems that can provide off-balance sheet transactions, avoiding the need for your organization to go through a capital budgeting program.
